water management topics with a panel
of representatives from ADA, Defra, and
risk management authorities.

16.15 CLOSE

Tuesday 25 November 2025 | 11.00 – 16.15

Welcome to the ADA Flood & Water Conference 2025

Robert Caudwell OBE, Chair, ADA

On behalf of the President, Vice Presidents, Directors and all the team at ADA, welcome once again to One Great George Street and our ADA Flood & Water Conference 2025.

We come to Conference with another year of climatic records behind us – the UK's driest summer in some places, Jamaica devastated by one of the strongest hurricanes recorded there, the North Pacific registering unprecedented increases in water temperatures, and more. And we will be hearing first-hand about how the murderous floods of Valencia affected not only local people communities and businesses, but how it has become a national wake-up call to authorities on a range of climate risk management issues.

The Flood & Coastal Risk Management Strategy refresh majored on the UK's resilience and adaptation to flood (and

drought) risk and its messages were universally welcomed when it was published. There has been good work to improve our understanding of the risks, commit to increased levels of capital funding and, most recently, to shift policy away from a narrow view of benefits to a much wider value-for-money approach. I welcome that. But we continue to have a major weakness in policy around maintenance and it is our duty to continue to shout from the rooftops about this to Government to persuade them to change course on decades of underinvestment in our flood risk infrastructure. Defra Ministers have gone part of the way by recognising the need to invest in the capital refurbishment of assets, but there are many assets that don't or won't qualify for that treatment, such as our main river channels choked by years of under-maintenance.

Modern Drainage Boards aren't just about drainage — they're about managing water levels wisely and making the most of the water we have. IDBs can support both farming, nature, and communities through thoughtful, integrated water management. (WMA)

We also face the increasing cost of electricity to keep people businesses and the environment protected from flood risk. Those charges are expected to escalate significantly and, if we have a more active climate, then we can expect to have to pump more water to keep us dry or provide water as a necessary resource – the perfect storm for public finances.

But before we get into the conference presentations, please take time to catch up, network and have lunch with our Associate Members in the Great Hall. I am most grateful to Balfour Beatty and Wilkin Chapman Rollits LLP who are once again our event sponsors.

I am delighted that the Rt Hon Alistair Carmichael will present our keynote speech this year. As chair of the Environment Food & Rural Affairs (EFRA) Committee, Alistair is becoming all too familiar with some of the issues facing communities across our river catchments with many of his committee members directly affected by flood risk.

I am also very pleased to welcome our four other speakers. David Porter, this year's President of the ICE, will bring us not only his past experience of managing Northern Ireland's river network, but also the wider perspective of the need to manage and maintain our valuable water and flood risk infrastructure.

David Hernández Gómez, Technical Manager of the Spanish Federation of Irrigation Communities, will tell us about the climatic pressures being faced by Spain, highlighted by recent droughts and the catastrophic flash flooding that hit Valencia and other parts of Spain on 29 October 2024. Lila Thompson will tell us about her work with British Water and Defra's Director, Sebastian Catovsky, will give us the latest news and views on Government policy and strategy.

This year, and for good reason, we have an extended Q & A session at the end of the Conference, so if you do not need to rush off, stay with us. Mark Suthern, one of the Environment Agency's non-executive Board Members, will be on the panel with some of the speakers and ADA to take questions from the audience.

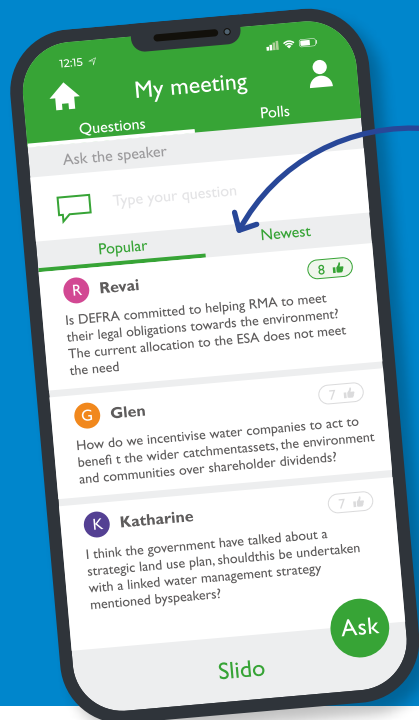

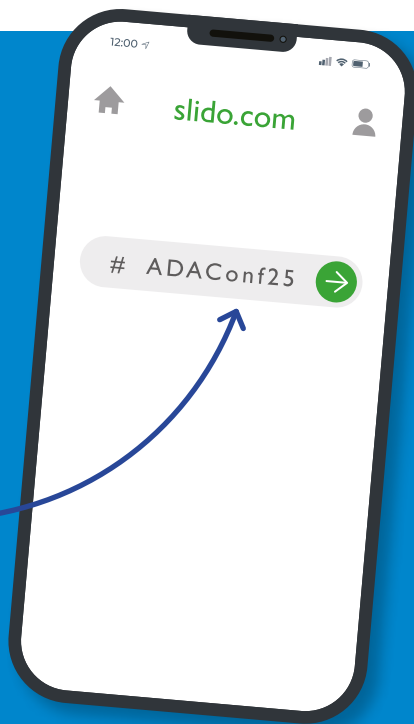

I do hope you enjoy the day with us and your support is greatly appreciated.

A handwritten signature in black ink, which appears to read 'Robert Caudwell'.

ROBERT CAUDWELL OBE
CHAIR, ADA

Rt Hon ALISTAIR CARMICHAEL MP
Chair, House of Commons
EFRA Committee

Alistair is both the longest-serving Liberal Democrat MP and the senior Scottish MP in the current UK Parliament.

Born and raised on the island of Islay to hill farming parents, Alistair had a career before politics as a hotel manager and a solicitor after earned an LLB from the University of Aberdeen in 1992 and a diploma in Legal Practice in 1993. He is married with two sons and lives in Orkney.

Having a lifelong interest in politics, Alistair joined the Liberal Party at age 14. He first became a member of parliament for Orkney & Shetland during the 2001 general election. Alistair served as Secretary of State for Scotland from October 2013 to May 2015. He has held various other roles, including Deputy Chief Whip, Liberal Democrat Northern Ireland and Scotland Spokesman, and Home Affairs Spokesman.

Alistair was elected unopposed as Chair of the House of Commons Environment Food & Rural Affairs (EFRA) Committee on 09 September 2024. The Committee scrutinises the work of the Department for Environment, Food & Rural Affairs (Defra). On 12 September 2025 the EFRA Committee launched a long-term thematic inquiry into climate and weather resilience, to examine how well the UK is preparing for and responding to environmental and weather-related risks such as flooding, landslips, wildfires, drought, and coastal erosion. The Committee is exploring the effectiveness of national strategies, the integration of resilience into wider planning and investment decisions, and the adequacy of current systems to protect people, places and nature.

On 02 October 2025, Alistair was named NFU Farming Champion of the Year at the Farmers' Weekly Awards 2025.

DAVID HERNÁNDEZ GÓMEZ
Technical Manager, Spanish
Federation of Irrigation
Communities

Having studied agricultural engineering at the Technical University of Madrid, David has worked since 2006 in the technical department of the Federación Nacional de Comunidades de Regantes de España (FENACORE). He helps to represent the Irrigation Communities of more than 700,000 irrigators and more than two million hectares across Spain. His work has focused on energy for irrigation, coordination with other irrigators across Europe, representation on the Water Framework Directive in Brussels, and convening training for Irrigation Community technicians and managers.

David will give us an overview of the climatic pressures faced in Spain, highlighted by recent droughts and the flash flooding that hit Valencia and other parts of Spain on 29 October 2024. With increasing competitive demands for water, David will stress the importance of modernisation in water management.

LILA THOMPSON
Chief Executive Officer,
British Water

Lila is the Chief Executive Officer of British Water, which represents the interest of UK water and waste water supply chain companies. Lila has over 20 years of experience driving business growth, policy development and stakeholder engagement in a variety of sectors. Lila was formerly British Water's International Director and responsible for helping supply chain companies grow their businesses globally. Lila will emphasise the importance of connections and collaboration between the different parts of the water-related sectors.

DAVID PORTER
President,
Institution of Civil Engineers

SEBASTIAN CATOVSKY
Co-Director of Floods & Water,
Defra

Initially an engineer for the roads authority in Northern Ireland, David became a principal engineer at the Rivers Agency in 2006, moving into the world of flood management and drainage. He became Chief Executive of the Agency in 2015 and worked there until 2017, when he was appointed as Director of Engineering in the Department for Infrastructure. In his current role David is the Head of Profession for civil engineering within the Northern Ireland Civil Service. David recognises that maintaining our existing assets is a huge challenge at present. His expertise and experience make him perfectly placed to talk to us about the importance of long-term planning for asset management. David became the 161st President of the Institution of Civil Engineers on 04 November 2025.

Sebastian is Co-Director of Floods & Water at the Department for Environment, Food & Rural Affairs (Defra). A highly influential civil servant working alongside and advising government, Sebastian has served two stints at the Treasury, provided independent scientific scrutiny as Head of Adaptation at the Committee on Climate Change, and has a breadth of experience within Defra. A regular attendee at past ADA conferences, we are delighted that Sebastian will be addressing us to present the latest thinking on government policy and strategy.

ADA activities in 2025

Despite its modest size, ADA continues to punch above its weight in 2025, delivering significant benefits to its members across the flood and water management sector. Below are some of the highlights from the year:

Future of ADA

ADA's Board of Directors has approved a new three-year Business Plan to further develop the Association through to 2029. It sets ADA the purpose to shape the future of water level management, connecting land, water, and people who manage water, to deliver climate resilience, sustainable natural value, and better places. Directors have called on ADA to work with ASA towards establishing a new broader and inclusive association for 'Flood & Water Authorities'.

IDB Storm Recovery & Asset Improvement Fund

ADA has worked closely with Defra, EA, and IDBs to support the delivery of these important asset repair and climate resilience projects, showcasing IDBs' ingenuity, pace, and local knowledge. Over 200,000 hectares have already benefitted, with 279 projects funded across 94 IDBs and £52.6 million issued to date. Works have included: 6km of bank stabilisation, extended asset life in 66% of projects, 32 mobile pumps boosting resilience, telemetry upgrades to facilitate remote operation, and tilting weirs for more dynamic control of water levels. After successfully lobbying for extending the government fund into 2025/26, funding was increased by £16 million to £91 million. ADA continues to make the case for the value for money and multiple benefits the fund has delivered.

Good Governance Guide 2nd Edition

Supported by ADA members Wilkin Chapman Rollits LLC and financed by SAAA, ADA has published an updated version of the 2018 Good Governance Guide for IDBs, an authoritative and comprehensive guide to the role and functions of IDBs as democratic water managers serving their local community, economy, and landscape.

Flood Funding Reform

In July, ADA responded to Defra's proposed approach to funding and prioritising new flood and coastal erosion projects. Overall, the changes simplify the approach to funding and take account of the growing pressure on replacing and refurbishing existing assets and systems. However, ADA members remained frustrated that more fundamental aspects of flood funding were not addressed, related to the revenue maintenance of assets and systems, and how we value and proportion the benefits of schemes within areas with multiple sources of flood risk. Furthermore, future floods investment needs to create climate resilient communities and landscapes, and optimise assets to safely retain water within the landscape.

Lowland Peat

ADA continued to provide subject expertise and administrative support for Defra's Lowland Agricultural Peat Small Infrastructure Pilots during 2025. Twenty LAPSIP projects

have successfully delivered infrastructure to retain higher water levels safely across over 25,000 hectares of peat soils in lowland England, facilitating the reduction of carbon emissions. The £3.8 million of funding has been invested in over 50 structures installed by IDBs and their suppliers, enabling the more dynamic control of water levels, as well as over 100 water levels sensors to monitor and automate the operation of those assets and systems in remote areas.

Environment Day

On 05 February, ADA's third annual Environment Day, sponsored by Xylem, provided an insightful day of talks related to the management of the lowland watercourses and the freshwater environment. To a capacity audience at Park Farm, Thorney, informative speakers presented to members on: LAPSIP, climate change risk and the aquatic flora of the Fens, river restoration, American mink, and beavers.

Electricity Charges

ADA has continued to monitor the cost pressures imposed by rocketing electricity standing charges on pumping station operators. Reforms by Ofgem to the method that the cost of managing and maintaining the electricity network are funded have resulted in exorbitant standing charges for customers with low annual consumption, but high-capacity requirements. Disappointingly, a change proposal to alleviate this issue was rejected by the DCUSA, and ADA has been gathering data from IDBs to lobby DESNZ ministers and constituency MPs.

IDB Funding

ADA has continued to monitor increasing drainage rates and special levies resulting from substantial inflationary cost pressures on IDBs, sharing data with Defra and MHCLG. ADA has actively contributed to the discussions of the LGA's Special Interest Group seeking to address the financial pressures of special levies on local councils. ADA's involvement has served to enhance relations with local councils and improve the understanding of IDBs' work. ADA has worked closely with Defra to form the scope of the joint study being undertaken with MHCLG to review IDBs' funding model and operational costs. ADA has secured a seat on the study's senior advisory panel to guide and monitor its progress and assist the appointed consultants' understanding of IDBs.

IDB Governance

ADA is supporting the Middle Level Commissioners and Ely Group of IDBs in their studies investigating future IDB amalgamations. ADA would encourage IDBs to consider similar steps soon with adjacent boards, to ensure continued effective local governance of water level management in light of anticipated local government reorganisation.

Flood & Coast

ADA was a strategic partner in this year's Flood & Coast Conference held in Telford in June. As well as hosting a joint stand with ASA, and a plenary session with local MPs, ADA officers chaired workshops and twice presented on rural flood resilience and lowland peat. Both associations appreciated interest shown in their members' work, and the opportunities to meet a wide range of technical specialists and strategic industry leaders.

New Recruits

ADA has successfully appointed Michael Sly as Deputy Chair through a competitive application process. Michael, a Fen farmer, Chair of North Level District IDB, and former Chair of NFU Sugar, will succeed Robert Caudwell as ADA Chair when he stands down in Autumn 2026. ADA has also appointed two influential new Vice Presidents, Peter Glas and Lee Pitcher MP. Peter, a former Dijkgraaf and Delta Commissioner, will provide interesting connection to water management in the Netherlands, and Lee, who previously worked in the water management sector, provides an important connection into Parliament.

Floods Resilience Taskforce

ADA is actively contributing to the Government's Taskforce that brings together experts and decision makers from across UK government and non-government organisations. The quarterly meetings are chaired by the Minister for Floods & Water, and ADA has been able to press for dialogue around river maintenance, with discussions anticipated at the next meeting.

Ministerial engagements

Several opportunities have arisen for contact with Defra ministers during 2025. ADA was instrumental in arranging a visit by Minister for Floods & Water, Emma Hardy MP, to the Witham & Humber Drainage Boards in October. The meeting provided the opportunity to discuss a variety of issues of concern as well as showcasing the successful delivery of Defra funded IDB projects.

In Parliament

ADA has had increasing contact with MPs during 2025, supporting a growing interest amongst MPs in sustainable flood and drought management. ADA appeared before the House of Common Environmental Audit Committee on 19 May having submitted detailed evidence on behalf of members to the Committee's flood resilience in England inquiry. ADA has arranged and administered six APPG meetings for parliamentarians in 2025 in partnership with CIWEM, as well as attending other parliamentary events. Subjects have included: the operational costs for IDBs and Local Authorities, resilient infrastructure needs, enabling water smart homes, rainwater harvesting, SuDS, and the importance of soils and land management.

Better Environmental Regulation

Following concerns regarding long delays to applications from RMAs for Flood Risk Activity Permits (FRAPs), ADA has called for a fundamental rethink of England and Wales's Environmental Permitting regulations, and suggested that Defra and the EA look closely at the regulatory approached used for water boards in the Netherlands. It utilises a Code of Conduct to provide clear rules for managing and maintaining linear lengths of watercourses and thousands of assets across an extensive lowland environment. As a result, water boards do not apply for environmental permits, exemptions, or exclusions from the regulatory authorities for all of their routine management and maintenance activities, reducing bureaucratic delay, and facilitating practices that enhance the aquatic environment.

Rural Flood Resilience Partnership

ADA is an active member of the partnership (alongside the EA, NFU, CLA, NE, and ACRE), seeking to improve collaboration, deepen understanding of rural vulnerabilities, and support agricultural businesses and rural communities in building their resilience to flooding. ADA is developing the Partnership's website.

Wales

ADA has renewed and enhanced working relations with NRW, visiting the Newport Levels and welcoming David Letellier onto ADA's Policy Committee. When conditions are right, ADA is ready to assist NRW in reviewing the future operations of internal drainage districts in Wales.

Audit Thresholds

ADA has assisted the SAAA in securing from government the legislative changes to increase the upper threshold for limited audit arrangements from £6.5 million to £15 million per financial year. ADA provided data and information from IDBs, highlighting the justification for the changes, which provide a substantial cost savings for larger IDBs.

Regional Strategies

ADA retains an influential position on the Programme Board on both Fens2100+ and Humber2100+ on behalf of members, ensuring that local IDBs have a voice in the development of both of the long term strategies development for managing future flood risk management in both of these important lowland landscapes.

Main River Maintenance

ADA is coordinating a national call for increased focus on routine main river maintenance following growing pressures on the EA to reduce, stop, or plan withdrawal of maintenance activities. This involves high-level discussions with Defra, the EA, and other strategic partners such as the NFU, CLA, ADEPT, and LGA SIG. These efforts grew in intensity following the surprise announcement by the EA of the planned permanent withdrawal of maintenance activities from stretches of main river in Somerset. ADA has supported the Somerset IDBs in challenging the EA's approach and intentions, and the need for local coordination between RMAs. ADA has also secured agreement by the EA to review and update PSCA guidelines to enhance the essence of co-operation between RMAs rather than taking an overly contractual approach.

Schools Challenge

Pupils from six secondary schools participated in the ADA sponsored Power of Water Challenge within the Lincolnshire Agricultural Society's Schools' Challenge 2025. They researched and made a model to show the different ways that water can be managed to reduce flooding and alleviate drought. It was fantastic to have so many pupils learning about water this year; and clearly the judges at the Lincolnshire Show were impressed by their effort and creativity, as Queen Elizabeth High School, Gainsborough won overall in the secondary school section with University Academy Holbeach coming second. Well done to all the pupils involved.

Protecting communities through climate resilience and adaptation

For more than 20 years, we've helped protect communities and economies from flooding and coastal erosion – successfully delivering over 75 projects that reduce risk and build resilience across the UK.

Working in partnership with the Environment Agency, Internal Drainage Boards and local authorities, we combine technical excellence with sustainable innovation to design and construct resilient flood defences, coastal protection schemes and land drainage systems. These solutions help strengthen communities and safeguard the environment for generations to come.

Let's build a more resilient future together.

jim.hutchison@balfourbeatty.com

balfourbeatty.com

Balfour Beatty

 **SCAPE**

Delivering Islington's £23.1 million pumping station

Impact at a glance

- **£4.8m** in social value
- **115 tonnes** of carbon saved
- **7 hectares** of new wetland habitat created

Working with the King's Lynn Drainage Board, through the SCAPE Civil Engineering framework, we designed and constructed a new pumping station to replace the original 1959 asset. The new facility has a total capacity of 16,000 litres per second (l/s), powered by four fish-friendly concrete casing pumps operating at 4,000 l/s each.

Reducing carbon through smarter design

Excavated materials were reused across the site to form new landscaped features, eliminating 7,750 lorry movements and saving 115 tonnes of carbon emissions.

Further efficiencies came from the piling platform redesign, where a 1m-thick Type 1 limestone platform was replaced with a Geobind solution – 350mm of stabilised earth topped with 300mm of Type 1 – saving around £65,000 in material and disposal costs.

Digital innovation

Using an iPhone and Matterport 3D capture app, the team created an interactive 3D model of the old pumping station before demolition – preserving its history while improving design collaboration.

Enhancing biodiversity and community value

Environmental initiatives included tree planting, wildlife relocation and a 7-hectare wetland lagoon, earning the project Green World Ambassador status.

The team also delivered £4.8 million of social value, including five apprenticeships, 19 work placements and 45 education events, inspiring future talent across local schools and communities.

Drainage and water management

With extensive experience in dealing with issues that arise for internal drainage boards and flood risk management bodies across England and Wales, our specialist solicitors understand the relevant legislation, powers and responsibilities

Our specialist drainage and water management advisors have an in-depth knowledge of the Land Drainage Act 1991 and the regulatory framework that Boards are subject to.

We'll provide clear advice from the outset, plainly setting out the options available with a pragmatic approach. Our solicitors work collaboratively with public bodies and parties, to reach agreements quickly and efficiently so matters can move forward with ease.

So, please join us on **Stand 20 at Flood & Water Conference on Tuesday 25th November** to meet our team of experts and find out more about how we can help you.

Jonathan Goolden and Estelle Culligan co-authored the second edition of ADA's Good Governance Guide for Internal Drainage Boards drawing on their expertise in public sector governance and regulatory law to create a vital resource for Board members and clerks.
